BLASTING

Sandblasting, or abrasive blasting, is a process that involves forcibly propelling a stream of abrasive material against an object's surface. Sandblasting is used to smooth a rough surface or roughen a smooth surface depending on the object.

Sandblasting is often used as a part of the finishing process, removing materials from the object to prep its surface for coating. But what are the benefits of sandblasting certain objects or products before putting on the finishing everything off with powder coating? Here are some of the advantages of using sandblasting services for your business

we provides high-quality new window installation and replacement windows. Our quality craftsmen have been put through extensive training to keep up with the latest industry standards and codes.

TRADING, CONTRACTING & INDUSTRIAL SERVICES

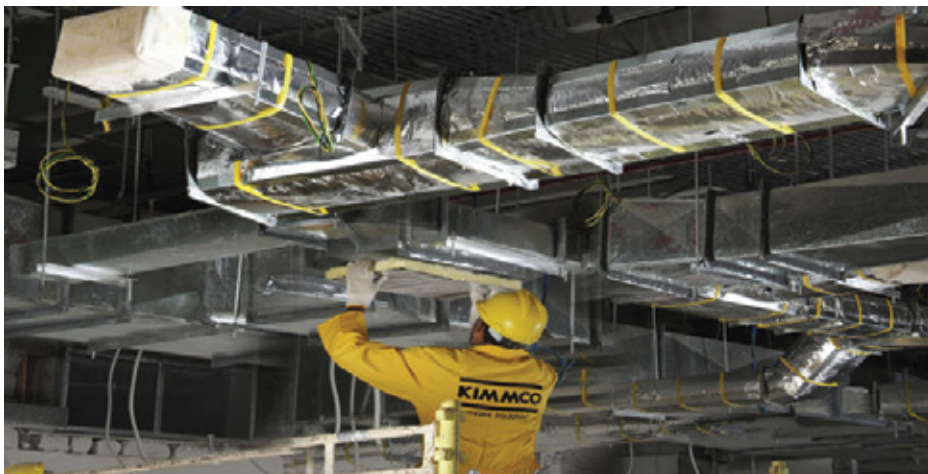

INSULATION

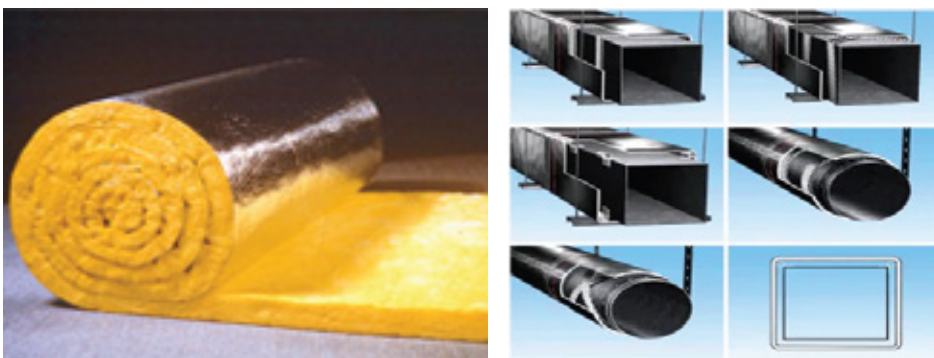

Using thermal insulation in the construction of buildings helps to reduce heat transfer through walls, ceilings, windows and other materials

Use of thermal insulation materials could cut the electrical energy consumption of air conditioning and heating devices by between 30 and 40 percent. the theoretical approach which seems to favour the use of suspended gypsum plasterboard for thermal insulation in the prevailing climatic conditions.

DUCT FITTING

Faced Duct Wrap Insulation is highly efficient, resilient, flexible blanket insulation composed of fine, stable and uniformly textured inorganic glass fibers bonded together by a non-water soluble and fire-retardant thermosetting and heat resistant resin. It is free from coarse fibers and shot due to its mineral composition.

TRADING, CONTRACTING & INDUSTRIAL SERVICES
